- Git y SVN
- JSON, XML
- Amazon Web Services

WikiJS as a documentation system.

Implementation of Ollama + Open WebUI, for retrieval-enhanced generation (RAG), to retrieve all types of documents in addition to internal wikis and with apache tika to retrieve text from files.

## Work experience

### Indra - Minsait

Valencia

1 year

I contributed to the development of an application based on Spring Boot (Java) where I used technologies such as JS, HTML and CSS, with Bootstrap and Thymeleaf for the design. This application had connection and execution functionalities through JPA and JDBC in addition to being made using Hibernate and Maven. Security with MSSQL and Tomcat and version control with SVN. In addition to logs, debugging and documentation.

### VAPF

Alicante

1 year - Present

I have contributed to the continuous development of an application for android and ios with React Native, with 2 backends in Python (Django) and Java (Tomcat) with Mysql and Postgresql databases, in addition to developing a Nginx as a reverse proxy with Lua in Docker.

Improved the infrastructure moving it to docker. Implemented a wiki to the document management. I have also incorporated Git, version control to the source code of the desktop application and tomcats in Java.

Incorporated cloud services like S3, or mail server like Workmail from AWS, migrated from a local postfix.

Currently working on incorporating AI to improve the company's production. And integrating APIs with third parties like Deepl or Docuten among others.

## Education

### E-Commerce Web Development

Marketing Online (2019)

- Knowledge of search engine optimization, SEO and digital marketing.

### I.E.S. Jaume II el Just

Superior Degree in Multiplatform Applications Development.  
(2020-2022)

- I have learned to develop cross-platform applications with access to databases using languages, libraries and tools appropriate to the specifications.
- Studies mainly in Java, JavaScript, Python & SQL.

### ReactJS Bootcamp

Single Web App deploy (2023)

- I made a simply web app with React in jsx with the api of TMDB which let's you search your favorites movies, with authentication & deployed in AWS.

**Courses on Udemy,  
FreeCodeCamp and CS50.**
